

Is the Information that Patients have on the Internet in the Medical Field Safe for the Type of Population We Have Today?

Huang, W. L

Infectious Diseases, General Practice, Nutrition, Acupuncture and Pain Management Specialist. Medical Acupuncture and Pain Management Clinic, Franca, São Paulo, Brazil.

INTRODUCTION

The internet revolutionized the information shared and the retrieval of this information is easier than years before. Information is available in people's hands at any time of the day using smartphones, laptops, or tablets. [1] What I want to say in this editorial is that human being is changing their energy pattern since mid of the last decade due to the influences of electromagnetic radiation of the implementation of 4G and 5G technology and leading to a state of immune deficiency. [2]

All these alterations are not studied by Western medicine because, since the implementation of the Flexner report in 1910, they considered "scientific" only what they could prove at the laboratory or radiological level. And all alterations in the energy level were not considered by the "scientific" community. For this reason, Western medicine's reasoning can only understand the part of the transformation of energy after materializing to be able to see by the naked eye. [3]

All the part of the energy, that is still invisible by the naked eye is still not studied by Western medicine and we need to reevaluate the type of medications that we are using nowadays to treat the majority of diseases, due to these alterations in the energy level. [4] After the implementation of the Flexner report (1910), they said that the only "scientific" medications is the ones produced by the pharmaceutical industry, and all the medications such as phytotherapy and homeopathy were considered "non-scientific" at that time. [3]

In the article I wrote (2021) titled *Why is Homeopathy the Medication of Choice in the Treatment of All Kinds of*

Diseases Nowadays? I am showing that the energy pattern of our population changed to a very low level in any internal massive organs (Heart, Spleen, Lungs, Kidney, and Liver) according to the five elements theory of traditional Chinese medicine. The use of any kind of highly concentrated medication in this new type of population nowadays will cause more complications because will reduce even more energy, which is already very low, and will cause Blood stagnation and leads to thrombosis, myocardial infarction, strokes, or even sudden death of the patient. [5]

All this information was shown in the article written by myself (2021) titled *Are the Medications That We Are Prescribing To Our Patients Harming Them?* [4]

During this COVID-19 pandemic, the population was at this lowest level of energy proven by research that I did in my clinic in Brazil that was shown in the article written by me (2021) titled *Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection*, and many clinical manifestations related to SARS-CoV-2 virus was caused by this energy deficiency situation such as dyspnea. In this case, this clinical manifestation could be caused by the difficulty in the transmission of energy from the Lungs to the Kidney, in the five elements theory of the generation cycle. All these explanations were done in the article written by me (2021) titled *Are the Pulmonary Manifestations in COVID-19 Really Caused by the Virus?* [6,7]

***Corresponding Author:** Huang Wei Ling, MD, Rua Homero Pacheco Alves, 1929, Franca, São Paulo, 14400-010, Brazil.

So, in the article also written by myself (2021) titled *Why Homeopathy Is the Medication of Choice In The Prevention And Treatment of COVID-19 Infection?*, I am saying that due to the energy deficiency inside the five internal massive organs of our population nowadays, the medications of choice to be used are highly diluted medications to increase our vital energy instead of reducing it was said by two German researchers in 1888, about the Arndt-Schultz Law.[8, 9]

In this law, they are saying that the use of any kind of highly concentrated medications will reduce vital energy and cause complications or even death of this patient. The use of highly diluted medications can increase vital energy, which is already very low, and can treat this condition of reduced energy. [9]

For this reason, the majority of studies we have online nowadays are saying about the treatment of the majority of diseases using highly concentrated medications, which is considered “scientific” by the medical community but they are harming the energy of the majority of populations nowadays. [4] In this case, when one patient has some medical problems and searches on the internet to see the option for his treatment, the majority of the options were including highly concentrated medications that could harm his vital energy in this new type of population that we have nowadays. I described one case of the mother of my patient that was having flu-like symptoms. She used one dose of syrup to treat her cough and after intaking one dose of medication, she died in front of her son. [10]

I measured the energy of her son two months after she died and her son was in the lowest level of energy in all five internal massive organs such as the Liver, Heart, Spleen, Lungs, and Kidney. I said to him that his mother probably was in the lowest level of energy inside the organs like he was and she died because all medications in high concentration could reduce the energy, in a patient very deficient in energy and cause Blood stagnation leading to myocardial infarction, stroke or sudden death. [10]

For this reason, the medications of choice to be used nowadays are highly diluted medications such as homeopathy medications created by Hahnemann (1755- 1843). [11] But not only medications created by Hahnemann (1755- 1843), should be used these days but we can transform the highly concentrated medications into highly diluted medications to be used nowadays. For

example, I usually use Chinese herbs to treat my patients with some conditions that no other drug could do the same effect. But after I see in my study made from 2015 to 2020, analyzing 1000 patient’s internal massive organs energy, using the radiesthesia procedure, I concluded that 90% of all my patients were in the lowest level of energy, rated one out of eight, independent of the age group of the type of diagnosis. [6, 11]

These findings include babies, children, adolescents, young adults, and older patients. Every disease has in common, energy deficiency inside the five internal massive organs according to traditional Chinese medicine’s reasoning and each organ is responsible for the production of one specific energy for our survival and for our health.

For example, *Yin* and *Yang*’s energy is produced by the Kidney, Blood is produced by the Spleen, and *Qi* is produced when there is a normal production of *Yin*, *Yang*, and Blood and it is distribution is made by the Liver and Lungs. The normal Blood flow inside the Blood vessels is made by the Heart’s energy. You can see that if all organs is not having enough batteries to work normally, these energies are not produced to keep us alive and for this reason, we can see many things happening nowadays such as sudden deaths, increased cases of myocardial infarction, strokes, thrombosis, increase cases of cancer, diabetes, even in children, etc. All the things are caused by these alterations in the energy level, that the majority of studies are not taking into account, and they are all talking about the use of highly concentrated medications to treat the majority of diseases. [12-16]

To finalize this article, I would like to say that the integration of thoughts of Western and traditional Chinese medicine is very important to us to understand all the alterations that it is occurring in the “leaf” level of the tree (where Western medicine is focusing nowadays), caused by the energy alterations presented in the “root”(where traditional Chinese medicine understands that is the cause of all formation of diseases in the “leaf” level of the tree) and also, the influences of the external pathogenic factors, that can begin the diseases process in a weak body, considered immune deficient and not immune competent. [2, 17-21]
